No paving method enhances architecture and landscape designs like brick paving. And no one installs brick pavers better than Paver Construction. Whether you choose one of our distinctive "dry-set" paving stones or antique construction brick, Paver Construction will create a dramatic statement that compliments your site.

The lasting beauty of brick paving will stand up to the harshest weather and, unlike other paving methods is not affected by repeated freeze/thaw cycles. It never needs sealing and requires no maintenance whatsoever. Stronger and more dense than concrete, it will tolerate heavy truck traffic

and can be snow-plowed by conventional methods (while antique brick makes a stunning patio or walkway, we recommend "dry-set" pavers for driveway applications).

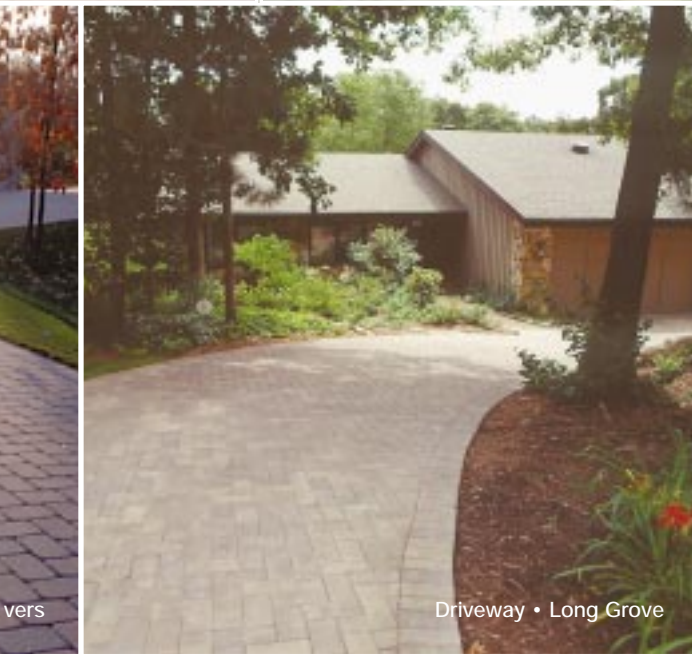

In the event that subsurface work needs to be done in the future (like underground pipe repair, underground wiring, etc.), brick paving can be removed in the area that needs work and the original bricks replaced leaving no detectable patch. Age actually improves the look of brick pavers, so your driveway, walk, or patio becomes even more beautiful with each passing year. In the end, the real cost of paving with brick compares favorably with other paving materials and methods.
